

Digital Documents On-demand

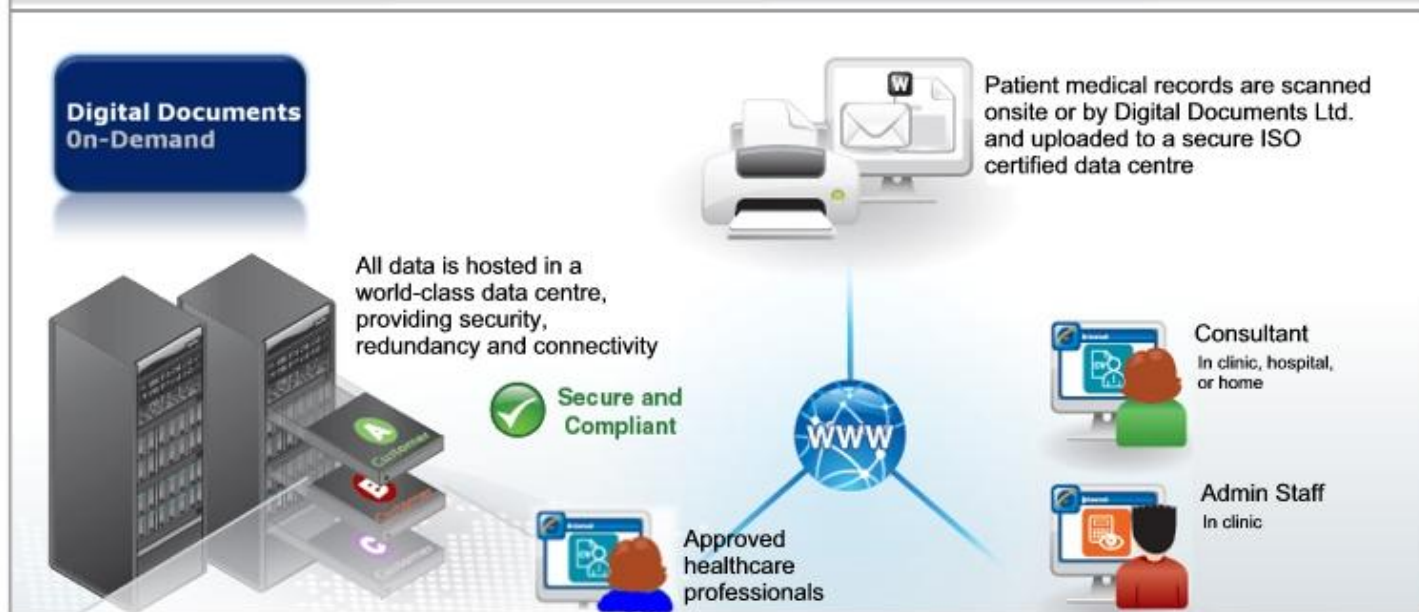

Traditionally patient medical records have been stored in paper filing systems or computer hard drives. Although this has worked well in the past, these systems are not without their challenges and risks.

Easy to use and simple to set up, Digital Documents on-demand is a hosted service that enables medical consultants to securely access patient medical records from anywhere. Digital Documents on-demand will facilitate consultants to view complete patient medical

records from a clinic, hospital, or home. If necessary, other authorised healthcare professionals can share access and collaborate on the same patient medical records.

One major fear associated with traditional paper filing systems and computer hard drive storage systems, is the risk of fire or water damage. Digital Documents on-demand eliminates these risks.

How it Works

Key Features:

- ✓ Secure, confidential, and compliant
- ✓ Simple view, print and email functionality
- ✓ No hardware capital expenditure
- ✓ Proven technology used by leading medical organisations
- ✓ Maintains audit trail and version control regardless of disaster

Key Benefits:

- ✓ Instant access to patient medical records , correspondance, notes etc. from anywhere
- ✓ Removes storage costs
- ✓ Protects patient medical records in the event of disaster
- ✓ Low monthly cost
- ✓ Simple to use
